Dasgupta's Recent Advances in Obstetrics and Gynecology

The book is a must book for postgraduates to keep themselves abreast with the latest advances in obstetrics and gynaecology. Recent guidelines have been discussed. The chapters have been carefully selected in accordance with latest international proceedings. The language is simple, easy to understand and concise. Ovarian tissue cryopreservation, laproscopic cervicopexy, induction of labour, polycystic ovarian syndrome, ovulation induction protocols cover the latest advances. The authors are very experienced, and they gave penning down their experience of years. It is a handy book which should find place in all libraries and bag of students. Current updates in cesarean section techniques, preterm labour and obstetric hemorrhage will be very helpful for obstetricians. I must congratulate Dr Nandita Palshetkar for such excellent evidence-based work. I also congratulate Co Editors Dr Pratik Tambe and Dr Rohan Palshetkar for such informative update.

Ruchika Garg
