Recent Advances in Obstetrics and Gynaecology 27

Recent Advances in Obstetrics and Gynaecology 27 covers all the latest developments in obstetrics and gynecology in a lucid, simple, and easy-to-understand language. The chapters on Fetal therapy, Urodynamics, and Medical management of urinary incontinence and overactive bladder have been discussed in detail. Fetal therapy in twin-to-twin transfusion syndrome has been explained. Newer ways of delivering impacted head at caesarean section have been discussed. The expert opinions and translating scientific studies to easily understandable facts has been done throughout the book. Screening of gynaecological cancers based on genetics or surgical prevention in high-risk women has been described in detail. Ambulatory interventions in acute gynaecology and early pregnancy complications have been described in a separate chapter. The less spoken Vulvar cancer in elderly women has been elucidated. A separate chapter on Midwifery-led care has been provided.

Key points at the end of each chapter focus on practical and clinically relevant content. Book is an effective revision tool for postgraduate students too. The authors are experts in their field and have highlighted and updated their chapters for the fast-growing field. This is a must guide for all postgraduate students, those preparing for MRCOG, and also clinicians who want to keep themselves abreast with the latest advances.
