

Editorial

We are happy to bring yet another issue of JSAFOG to enlighten the readers with its scientific contents. The very purpose of this journal is to promote research in our countries and have our own data so that we can know the facts in this subcontinent rather to rely only on western data.

Scientifically, this issue deals with gestational diabetes and its screening in pregnancy. Pica in pregnancy is a common problem. Urinary incontinence though a very common problem is less discussed and has been reviewed. Other original article is on H1N1 influenza in pregnancy and comparison of laparoscopically assisted vaginal hysterectomy with vaginal hysterectomy. Journal scan keeps us abreast with the newer researches. We are receiving a lot of contribution from various countries.

And, we welcome all countries to contribute more interesting case reports, original studies and review articles. We would be happy to receive letter to editor concerning topics discussed in the journal with their own experience. Do subscribe to the journal. Institutional libraries can keep this journal as a readymade solution to many gynecological issues.

Contributions are also invited for your Journal of South Asian Federation of Menopause on menopausal and geriatric female issues. New volume of which is being released shortly and enriched with vital knowledge.

JSAFOG and JSAFOM are your journals and are indexed in renowned indexing databases, such as Google Scholar, Open J Gate, Ulrich, IndexCopernicus, HINARI, EBSCO, Genamics JournalSeek, ProQuest, Embase, Scopus EMCARE, CiteFactor.

Do not miss to view the interesting videos.

Happy Reading and Happy Viewing
